Crystal Blossom ¹ Cone 5 Lead Free Glazes

Crystal Blossom glazes were achieved with the following firing schedule in a programmable, 2.4 cu. ft. electric kiln. This firing schedule may require adjustment in different kilns and under varying conditions.

- Segment 1: Ramp 250°F per hour to 1250°F
- Segment 2: Ramp 350°F per hour to 2140°F
- Segment 3: Ramp 25°F per hour to 2165°F
- Segment 4: Cool down to 1950°F
- Segment 5: Hold 3 hours at 1950°F
- OFF

*This glaze is the base for the group of glazes with which it is displayed. To expand on our palette, add your choice of stains or oxides to the base. The possibilities are unlimited.

Test fire all glazes in your kiln and your firing environment before using in production. Photographic reproductions differ from actual colors. Results and effects vary with

Stock and Special Order Glaze Information

Laguna offers hundreds of stock glazes. Most stock glazes are available in liquid and dry form, with liquids formulated for brushing and dry glazes formulated for spraying and dipping (and **not** for brushing). Brushing medium is available for purchase separately to be added to glazes purchased in dry form.

Laguna can produce virtually any glaze you may require as a special order, whether dry or liquid. Special orders are subject to minimum quantity requirements.

The Laguna Lead Free Glazes bear a Non-Toxic Seal and have been evaluated by a nationally certified toxicologist and found to be in compliance with ASTM C-1023 and D-4236, and to not contain any material in sufficient quantity to be toxic or to constitute a chronic health hazard.
